The image shows a VS Code editor interface with three main panels. The left sidebar contains the Explorer view showing a project structure with folders like 'practice-3-4', 'backend', and 'frontend'. The main editor area is split into two panes. The top pane shows a REST client file named 'api.http' with three requests: 1) GET all products, 2) GET product by id (commented out), and 3) POST create product. The bottom pane shows the response for the first request, which is a JSON object containing product details like 'id', 'title', 'category', 'description', 'price', 'stock', and 'rating'. The right sidebar shows the 'Response' tab with the raw response data. The bottom panel is a terminal window showing the command 'npm start' being executed in the 'frontend' directory, with output indicating that the development build is not optimized and that webpack compiled successfully.
